INTRODUCTION

This Report is the result of a determined effort to make available meteorological summaries the publication of which in the normal annual form has been long delayed. These delays in publication have been brought about, partly by the continued increase in routine work created by expanding aviation services, and partly by staff shortage. However, with the publication of this Report, covering the years 1955 to 1959, and the succeeding Report for 1960, which will be available within a few weeks, it is expected that future reports will be published with a minimum of delay.

Meteorological services in Jamaica are now maintained by the West Indies Meteorological Service, formerly known as the British Caribbean Meteorological Service, formed in 1951 to serve all of the British Territories in the Caribbean and the Bahamas. With the establishment of the West Indies Federation in May, 1958, the Service was taken over and administered by the Federal Government. The headquarters of the Director of the Service are in Federal House, Port of Spain, Trinidad and the headquarters of the Jamaica Division remain at Palisadoes Airport, Jamaica.

The list of stations provides the most recent available information on the locations and elevations of stations. It would be appreciated if any errors can be notified to the Assistant Director, Jamaica Division, under whose supervision the Report is prepared and published. Also included are the names of authorities and private persons responsible for the maintenance of stations, while the extent and diversity of this list reveals the considerable effort made by large number of individuals in providing the basic data from which the final tabulations are derived. The Meteorological Service is indebted to all the various observers, both official and voluntary, who regularly maintain such a high standard of observing. Without their assistance it would not be possible to compile this series of valuable and informative reports. In particular, tribute must be paid to the Ministry of Agriculture and Lands through whose good offices clerical staff were made available to carry out much of the tabulations.

EXPLANATORY NOTES

1. The time used is Jamaica Standard Time, also known as Eastern Standard Time, which is five hours slow on Greenwich Mean Time. The times of observation at the climatological stations are 07h. (7 a.m.) and 15h. (3 p.m.) but the synoptic stations at Morant Point Lighthouse, Negril Point Lighthouse and Palisadoes Airport take observations at 07h., 13h. and 19h. (7 a.m., 1 p.m. and 7 p.m.) Additional observations are taken every hour at Palisadoes Airport but are not published in this Report.

2. So far as is possible, all instruments are sited in approved standard positions to give fully representative readings.

3. Rainfall is measured in inches at 7 a.m. and the total for the previous 24 hours is regarded as having fallen on the previous day. A "day of rain" is a day on which at least 0.01 inch is recorded. The mean monthly rainfall for each Parish included in the Summary of Parish Rainfall is obtained by taking the total rainfall reported from all of the stations within that Parish and dividing the total by the number of stations. The Island rainfall is the mean of all the Parish rainfalls.

4. Atmospheric pressure readings are converted to the equivalent readings at mean sea level under conditions of standard temperature and gravity and are expressed in millibars, 1,000 millibars being equal to a pressure of 29.53 inches of mercury.

5. Cloud amounts are expressed in 'oktas', an 'okta' being one-eighth of the sky.
